DrumWizard® Labeling System

free

✓ Simple to Use ✓ Powerful Features ✓ GHS Compliant ✓ Affordable ✓ Easy Integration

DrumWizard brings you a total solution for print on-demand labels. Integrated solution combines Product Manager, Print Manager and Label Design. Designed for Windows 7 with backward capabilities for windows 2000/XP operating systems. Suite supports multiple languages in data and label printing to answer globalization needs and GHS requirements.

DrumWizard® Product Manager

- **Management** of your entire product label elements including symbols and logos linking them to chemicals.
- **Reduces** compliance problems and eases supervision and maintenance.
- **Eliminates** Redundancy. You have the ability to enter text phrases once for all chemicals instead of once for each chemical.
- **WHMIS and European symbols** and European risk and safety phrases are included.
- Convenience of “Global Editing” and applying these changes to all appropriate chemicals.
- **Attach** your MSDS to Products
- **Security Features** - Full password security

DrumWizard® Print Manager

- **Eliminates** end-user errors and streamline labels production.
- Ability to **print to any printer** (Laser or Thermal)
- **Batch and Queue** Printing Jobs
- **Archive** Print jobs
- **Print time** information allowed

DrumWizard® Label Designer

- **Easy** and intuitive user design interface.
- **All standard bar code** including EAN, UPC, ITF, Code 39, Code 128, ISBN, ISSN, PDF 417, 2-D and QR.
- **All standard graphics** files and elements supported (JPG, WMF, GIF, BMP)
- **Fit text to box** and other advanced feature in label design.
- Place text **boxes or graphics anywhere on the page**
- **Multiple language support** for non-European languages (Cyrillic, Chinese, Malaysian, Japanese) as well as multiple language menus.

Why DrumWizard® ?

Compliance Issues	Using Word, simple Label design program or preprinted labels	Using DrumWizard
Accuracy of information and Consistency	Information has to be manually typed in - increasing the chances of mistakes.	The information on the label remains accurate by using standardized hazardous phrases that can be easily updated. The actual label is never modified.
Data Integrity	Information has to be manually edited on each label whenever regulation or change is called for.	Data is located in a database where Global edits are possible and existing data is retained as well.
Information on label	To change or verify information, every label needs to be examined individually	One click of a button to find all needed information and which products share it.
Number of labels to maintain	At least one label per Product. Increasing the chance of 'out-of-compliance' labels.	Only 2-5 label templates will need to be maintained. Eliminates the need to modify labels.
GHS Compliance	N/A	DrumWizard is GHS compliant.
Sales / Revenues/ ROI	Using Word, simple Label design program or preprinted labels	Using DrumWizard
Sales	Customers' needs have changed in the past few years. Today's customer wants their company's logo or specific barcodes. These requirements may not be attainable with the current labels or may require more hours of design.	Increase sales by offering your customers what ever they would like on the label. Adding customers' information is a snap!
Marketing	Any request by marketing personnel requires many hours of individually changing each label for each product.	Easily comply with customers' or marketing requests. Labels are updated through the Product Manager. All changes are done through the program and DO NOT EFFECT the actual Product information.
International Sales	Creating labels in many languages can be at best difficult if not impossible	Increase sales by adding as many translations as wish for each product. The program will print in almost any language including Chinese, Arabic, Creole, Russian and many more.
Personnel	Many hours have to be spent editing and creating labels.	Reduce the number of hours dealing with labels by about 90%.
Many Types of Label Stocks	Possibly several different label stocks are maintained due to customers' or marketing requirements.	SAVE money by the use of templates as it will reduce the number of different label stocks necessary to be purchased, thus allowing greater economies of scale.
