√ Simple to Use √ Powerful Features √ GHS Compliant √ Affordable √ Easy Integration

DrumWizard and The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)

What are the **GHS** label elements?

Some GHS label elements have been standardized (identical with no variation) and are directly related to the endpoints and hazard level. Other label elements are harmonized with common definitions and/or principles.

GHS

The major standardized label elements, other than Product, Supplier and Chemical information included in the GHS are:

- **Symbols** (hazard pictograms): Convey health, physical and environmental hazard information, assigned to a GHS hazard class and category.
- **Signal Words**: "Danger" or "Warning" are used to emphasize hazards and indicate the relative level of severity of the hazard, assigned to a GHS hazard class and category.
- **Hazard Statements**: Standard phrases assigned to a hazard class and category that describe the nature of the hazard.
- **Precautionary Statements**: A single harmonized set of precautionary statements to be followed for each product.

DrumWizard

DrumWizard is completely compatible with all the requirements of the GHS.

- **Symbols**: Symbols can be added or changed for any product. GHS symbols are included in the DrumWizard® Graphic library.
- **Signal Words**: Exist in the Product Manager, and are transferred to the labels through the label templates. Additional Signal Words can be added at will if the need arises.
- **Hazard and Precautionary Statements**: DrumWizard is built on the idea of standardizing statements as much as possible. Current GHS statements in 26 languages are included.
- **Product, Supplier and Chemical Information**: DrumWizard allows for the easy entry and maintenance of this information.
